

Over/Under Returnable Container System

The Over/Under Returnable Container System is designed to cost effectively increase productivity, streamline operations, and maximize space utilization. Its fundamental design provides for easy operation, a compact size, and low maintenance. The over under system can be used in minimal floor space conditions and will feed the work cells or the main line supplying the customer with an efficient and cost-effective material handling solution.

- Cost effectively increase productivity
- Easy operation, compact size, and low maintenance
- Durable construction provides long-term handling
- Reliable controls
- Various safety features
- Feed work cells or main line for efficient material handling
