

Rack Handling System

Airfloat has combined its resources to create the ultimate in manufacturing efficiency. We have incorporated the design of our shuttles, turntables and rack handling systems to develop this state of the art Automated Rack Handling System. This automated Rack Handling System provides the flexibility the customer needs in this rapidly changing environment. This modular system is designed with drop modular stations to adapt to the customers specific needs. It is adaptable to different configurations and rack sizes allowing for future expansion or reduction.

FEATURES

- Flexible—adapts to many different operator stations or positions.
- Quick Cycle Times—increases productivity.
- Modular Stations—Design the handling system to most efficiently meet your manufacturing needs.
- Adapt to different rack sizes, not dependent on rack condition.
- Allows for future expansion or reduction.
- Fully-automated rack indexing.
- Designed to integrate with robotics.
- Simple touch screen controls.
